answers, answers that we need as Representatives and which the administration should have also, if it does not have them already.

The 9/11 commission should be given more time to carry out its work, and the 2-month extension is not too much to ask. Why are we rushing the completion of the work of that commission? That question ought to be on the mind of every Member of this House, and every Member of this House ought to demand an answer. The extension ought to be granted, and it ought to be granted sincerely and accurately so that they have the full time that they need to complete their work.

There, of course, remains all of the questions that I raised, and many, many more. I have just begun to scratch the surface of the questions that remain with regard to what happened prior to our going into Iraq in that war, what has happened during it, and what is continuing to happen and what we will do subsequently with regard to that country. Many questions remain unanswered.

The responsibility to develop those answers lies with this House of Representatives. The leadership of this House should appoint appropriate bipartisan committees to look into these matters. We are derelict in our duty. We are not fulfilling our responsibilities to the American people on an issue that is of paramount importance, an issue that involves thousands of lives, hundreds of billions of dollars in American treasure and the future safety and security of the American people. Those answers should be forthcoming, and there should be no delay in setting up the mechanisms which will allow them to come forward.

POLL SHOWS ENTHUSIASM FOR FREE TRADE FADES

The SPEAKER pro tempore (Mr. KLINE). Under a previous order of the House, the gentlewoman from Ohio (Ms. KAPTUR) is recognized for 5 minutes.

Ms. KAPTUR. Mr. Speaker, I wish to place in the RECORD this evening a poll done by the University of Maryland that shows that even high-income Americans, those earning over \$100,000 a year, now have lost their enthusiasm for free trade and the loss of jobs in this country as they perceive their jobs are now threatened by white collar workers in China, in India and other countries, and rising anxiety exists across all income bands in our country relative to free trade.

So it is as much of a curiosity as anything that the chairman of the President's Council of Economic Advisers, Mr. Greg Mankiw, caused an uproar recently when he said the practice of shipping out our jobs, outsourcing U.S. jobs, is good for our country.

How can shipping out our jobs be a good thing? Not surprisingly, Mr. Mankiw was forced to backtrack and profess his sympathy for anyone who had lost a job. My goodness, that is the least he could have done. Predictably, Mr. Mankiw was defended by free trade fundamentalists like The Washington Post and some of his fellow economists. But something has changed profoundly in America over the past 10 years, and I would say it is reality. Reality has set in coast to coast.

NAFTA is celebrating its 10th anniversary, and we are seeing the impact of failed NAFTA-style trade policy throughout our country and continent.

It is no longer just in Ohio and Michigan, although the Great Lakes States are undoubtedly the epicenter of the job-loss earthquake. It is not just the Carolinas or Massachusetts, where the job losses have been so staggering. And it is not just vehicles, cars and trucks and the massive auto parts industry. It is not just machining businesses, and it is not just machinery in general

In fact, the damage to our economy from outsourcing and the doctrine of free trade is no longer confined to just the manufacturing sector.

Something has changed in America, and it will undermine and eventually destroy public support for NAFTA-style trade agreements. Suddenly, it is not only manufacturing jobs that are being outsourced to Mexico, to China and other low-wage platforms. Now outsourcing is beginning to bite into whole new sectors of our economy, where the promise of future job growth once lay. Indeed, the loss of jobs in manufacturing has been dramatic over the past several years.

Look at these sectors: apparel, 37 percent of the jobs lost; textile mills, 34 percent; primary metals, down 25 percent; machinery, down 22 percent.

But the decline in what has been called knowledge-based industries has been dramatic too: computer and peripheral equipment, down 28 percent; communications equipment, down 39 percent; semiconductors and electronic components, down 37 percent; electrical equipment and appliances, down 23 percent; telecommunications, down 19 percent; data processing, down 23 percent.

During the NAFTA debate, the free trade fundamentalists promised that high-wage, high-benefit jobs would be replaced by high-wage jobs in the computer sector. In other words, automotive industry jobs would be replaced by computer jobs.

Wrong. As economist Paul Craig Roberts wrote recently in the Washington Times, "For years, as U.S. multinationals moved manufacturing offshore, Americans were told their future was in 'knowledge jobs.' Today, knowledge jobs are being moved offshore more rapidly than even manufacturing jobs were moved away."

The Institute of Electrical and Electronics Engineers said last week that in 2003, the U.S. jobless rate for computer scientists and systems analysts has reached an all-time high of 5.3 percent. That is roughly in line with the

national unemployment rate of 5.6 percent. In Ohio, the unemployment rate is 6.2 percent, in my region of Ohio, over 8.4 percent, and in some counties of Ohio as high as 18.5 percent.

But the burden of proof is now in the proponents of NAFTA-style trade agreements. If outsourcing is sending the jobs of highly trained computer scientists, computer programmers and medical diagnosticians overseas, then where are the new jobs supposed to come from?

It is hard to believe, but Vice President CHENEY said, "If the Democratic policies had been pursued over the last 2 or 3 years, the kind of tax increases that both Messrs. KERRY and EDWARDS have talked about, we would not have had the kind of job growth we have had."

I would just ask the Vice President, where is the job growth? I do not see any job growth. And that is what the average real American is asking too, where are the good new jobs going to come from? Where?

Mr. Speaker, I include for the RECORD the poll I referred to earlier.

[From USA Today, Feb. 24, 2004]
POLL: ENTHUSIASM FOR FREE TRADE FADES;
DIP SHARPEST FOR \$100K SET; LOSS OF JOBS CITED

(By Peronet Despeignes)

High-income Americans have lost much of their enthusiasm for free trade as they perceive their own jobs threatened by white-collar workers in China, India and other countries, according to data from a survey of views on trade.

The survey by the University of Maryland's Program on International Policy Attitudes (PIPA) is one of the most comprehensive U.S. polls on trade issues. It found that support for free trade fell in most income groups from 1999 to 2004 but dropped most rapidly among high-income respondents—the group that has registered the strongest support for free trade. "Free trade" means the removal of barriers such as tariffs that restrict international trade.

The poll shows that among Americans making more than \$100,000 a year, support for actively promoting more free trade collapsed from 57 percent to less than half that, 28 percent. There were smaller drops, averaging less than 7 percentage points, in income brackets below \$70,000, where support for free trade was already weaker.

The same poll found that the share of Americans making more than \$100,000 who want the push toward free trade slowed or stopped altogether nearly doubled from 17 percent to 33 percent.

Rising anxiety about free trade and shipping out of U.S. jobs could intensify an already fierce political battle this election year.

In the fight for the Democratic presidential nomination, Sen. John Edwards, D-N.C., has gained ground on front-runner Sen. John Kerry, D-Mass., by hitting Kerry's support for free-trade agreements that critics say have cost American jobs. The two have bitterly accused each other of supporting past agreements.

Whoever the Democratic nominee, he is expected to use the trade issue against President Bush, whose administration has generally been supportive of free trade.

The poll was released last month, but breakdowns by income level were performed at the request of USA TODAY. The results are based on responses from more than 1,800 U.S. residents. The margin of error is ± 2.3 to 4 percentage points.

The findings suggest that anxieties about free trade long held by lower-income Americans and blue-collar workers—who have been losing jobs to cheaper labor markets abroad—have spread up the income ladder.

The findings come as the U.S. job market remains sluggish and accounting, computer programming, radiology and other high-end service jobs are being lost to workers abroad.

"This is huge," said Steven Kull, director of the Maryland polling unit. He said the PIPA poll shows most Americans remain supportive, or at least tolerant, of free trade, but with big caveats. "They're not saying, 'put on the brakes,'" he said. "But they are saying, 'Don't step on the gas. Don't rush. We need to make adjustments. We need more time to adapt to these changes."

IN DEFENSE OF ACTIONS TAKEN IN IRAQ AND TEACHING AN AP-PRECIATION FOR WESTERN CIV-ILIZATION

The SPEAKER pro tempore. Under the Speaker's announced policy of January 7, 2003, the gentleman from Colorado (Mr. TANCREDO) is recognized for 60 minutes as the designee of the majority leader.

Mr. TANCREDO. Mr. Speaker, as I listened to the comments that preceded me in the Special Order that dealt with our involvement in Iraq, certain thoughts came to mind that I think I would like to present this evening prior to getting involved with the issue of primary importance right now, or, I should say, not primary importance, but the issue I had intended to bring forward. I will do that, but I will do it subsequent to the thoughts I have had listening to our loyal opposition.

We have heard for approximately an hour that there were a number of things wrong with the intelligence reports that we received; that there are problems that we now face in trying to pacify Iraq; and that as a result of these things, there should be investigations. And a lot of people's integrity has been called into question, not the least of which the President of the United States.

\square 2045

There are many issues that I disagree with the President on, and I have not been hesitant to express my opinions when I do disagree. But on this issue of Iraq, let me just present a few ideas that may I hope stimulate some thinking about whether or not we were right to do what we did in Iraq.

I would ask, Mr. Speaker, for all of us to think about what pundits and political opponents would have said if in some time between, say, 1933, when Hitler took power in Germany, and 1939, when finally the world decided to go to war against Hitler, or at least a good portion of the world decided to go to war, what if at any point in time between 1933 and 1939 the United States and Great Britain and as many other countries as would join us would have taken a very, very bold action? And

that action would have been preemptive. It would have been before any sort of aggressive action had been taken by Germany and by Hitler against the West, against the Allies, before Poland had been invaded, even before Czechoslovakia. Could we imagine what would have happened on this floor and throughout the world, really, in terms of the reaction, if America and a group of nations had taken preemptive action and stopped Hitler, if we had gone into Germany, if we had deposed Hitler and attempted to bring about a different and truly democratic regime?

Well, certainly there would have been an awful lot of second guessing. Certainly there would have been people here on the floor of the House talking about the fact that we really do not know for sure whether V-1 and V-2 rockets were being developed. Maybe the hard evidence would not have been available at the time. And so where were we? Why were we doing such things and was it not against all rules of engagement, was it not something that we should be challenging our administration for and saying you did the wrong thing?

We did not have all of the very specific information that we needed to make this decision. Could it be that we would have been questioning whether or not Hitler's intention would have been to, in fact, bring about the "final solution" for the Jews in the world?

All these things would have been speculative, certainly. We could not have perhaps proven that that was his intent. We would have been perhaps without all of the hard evidence to bring in front of the world body to prove that the decision we made to preemptively act was right. But if we had done so, just think about what would have been the outcome of that decision and that action. Fifty million people, 50 million people died as a result of our unwillingness to take action. National treasure, untold national treasure had to be expended; and, of course, hundreds of thousands of American lives were lost to try and stop him and stop the Axis powers after they made their intentions perfectly clear.

Now, I think that there is a lesson to be learned here, and it is that at some point in time it is imperative that the civilized world take action and, in fact, take preemptive action to try to prevent an occurrence similar to World War II. If we could have done that now, knowing what was the outcome of World War II, knowing what it took to actually stop him when we chose to finally get involved, who would suggest that we should not have taken preemptive action?

Does anyone really believe that we should have waited knowing now what we know? Does anybody believe that we should have waited for Hitler and the Japanese empire to strike first? Well, we did. That is history. And we know the outcome. So I will suggest to the body that there was a great deal of evidence presented not just to the

United States but to many other countries and many other intelligence networks around the world that would lead us to believe that there was a problem in the making in Iraq. No one, not a single person has ever denied the fact that Iraq was in the process of developing nuclear weaponry and weapons of mass destruction; and, of course, we knew that they had used similar weapons in the past. So that was not a question.

The question is would he have, would Saddam Hussein have actually used those weapons had he gotten ahold of them? How long would it have taken for Iraq to actually obtain those weapons? Those are questions we do not know the answer to right now, but we can be fairly sure by all of the empirical evidence that we have in front of us that they have would have developed the weapons and that either he would have used them or think of this. what if, what if those weapons became disposable to the two sons of Saddam Hussein, Uday and Qusay? Does anybody really believe that they would like to live in a world where those two guys would have the ability to push the

Well, now they are gone. Saddam is in custody. Uday and Qusay are history. So now we can stand on the floor of the House and we can get on all of the talk shows and say we really did not have all of that to worry about. It really was not worth the expenditure of our resources, both human and financial. Well, maybe not. But I have to say that from everything we know about history and from everything that we know, absolutely, unequivocally know, not the if's, not the "I wonder if," but what we know about the regime in Iraq would lead us to believe that the action we took eventually would end up saving a lot of lives. Not only that, but we are now engaged in a very difficult process and that is to impose democracy, to plant the seeds of democracy in an area of the world in which, of course, it is a very alien idea. And the task is incredible, it is true, but think of the task we have faced when we chose to rebuild Germany and Japan and to rebuild those countries on democratic models. In Japan, of course, where it had never ever existed before, and in Germany, where it had been bastardized, the concept of democracy. We undertook that huge, monumental task; and people could have said in 1946, 1947, 1948, look at the problems we are facing. How come we have not been able to construct these democratic models over there by now? Why are American troops still occupying Germany and Japan? Why are our people still at risk? Why are we spending hundreds of millions of dollars which would equate in today's terms to hundreds of billions of dollars in the rebuilding of both Japan and Germany? Why are we doing it? They would have been there and they may have been here on the floor saying those things at that time. I know that is true.
